To understand plants

Quick Summary

Making Links

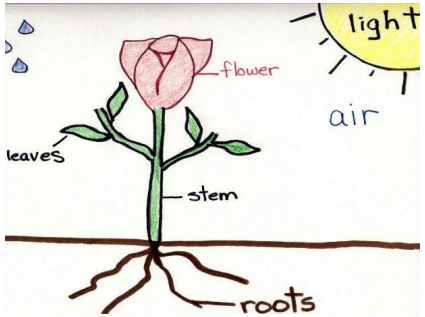

Woodland School: Using knowledge to plant flowers in a flower bed

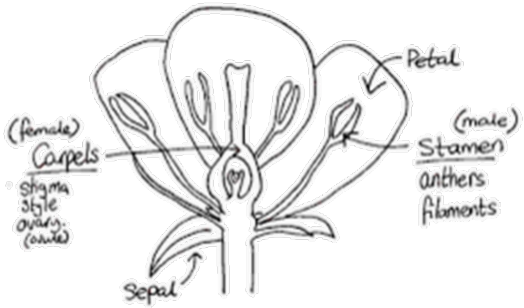

The Eden Project
(1995—)

The Eden Project is an educational centre located in Cornwall, UK. It is an charity that demonstrates the importance of plants to people and promotes sustainable use of plants.

Scientific Vocabulary

Stem: the long thin part of the plant which keeps the flower standing tall

Roots: the part of the flower located underground which keeps the plant anchored and looks for nutrients

Flower: the most attractive and brightly coloured part of the plant used for pollnation

Leaves: the large, flat green parts of the plant which use photosynthesis to provide nutrients

Nutrients: vitamins, minerals and energy which help the plant grow

Photosynthesis: the process where leaves turn sunlight into energy

Growth: the process in which a plant changes from a seed to a mature plant

Pollination: the process in which bees pass on particles of plants to another to help the plant reproduce

Seeds: the part of a plant that is discarded to create more plants
